

METROPOLIS DIAGNOSTIC CENTRE

MRI RADIOLOGY REPORT

Patient Name: Aarav Sen

Age: 31 Years

Gender: Male

Patient ID: MR-2026-01452

Date of Examination: 22 June 2026

Referring Physician:

Dr. Rakesh Sharma

Consultant Orthopedic Surgeon

EXAMINATION

MRI RIGHT KNEE

Clinical History

Patient sustained a twisting injury to the right knee while playing football approximately 3 weeks ago. Complains of instability, swelling, and pain while walking.

FINDINGS

- Complete tear of the anterior cruciate ligament (ACL).
- Complex tear involving the posterior horn of the medial meniscus.
- Moderate joint effusion.
- Mild bone marrow edema involving the lateral femoral condyle.
- Posterior cruciate ligament appears intact.
- Medial collateral ligament intact.
- Lateral collateral ligament intact.

IMPRESSION

1. Complete ACL Tear.
2. Medial Meniscus Tear.

Orthopedic surgical reconstruction is recommended.
